            Induces proliferation, migration and fenetration (GI) smooth muscle.
Induces proliferation, migration and fenetration (the formation of membrane discontinuities) in capillary endothelial cells derived from endocrine glands. Has little or no effect on a variety of other endothelial and non-endothelial cell types.
--- SUBCELIULAR LOCATION: Secreted protein.
--- TISSUE SPECIFICITY: Expressed in the steroidogenic glands, ovary, testis, adrenal and placenta.
--- SIMILARITY: Belongs to the prokinecitin family.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Homo sapiens (Human).

A structural homologue of colipase in black mamba venom revealed by
NWR floating disulphide bridge analysis.";
J. Mol. Biol. 283:205-218(1998).
-!- FUNCTION: Potently contracts gastrointestinal (GI) smooth muscle.
May act on potassium channels, but not on Kvl.1, Kvl.2, Kvl.3,
Kvl.4, Kvl.5, Kv2.1, Kv3.4, Kv4.2, TREK-1, HERG, KCNQ1, KCNQ2,
KCNQ3, IRK1, IRK2, ROMK1, GIRK1, 2 and GIRK1, 4.
-!- SUBCELLULAR LOCATION: Secreted protein.
-!- SIMILARITY: Belongs to the prokinecitin family.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    MEDLINE=20036442; PubMed=10567694; DOI=10.1016/S0014-5793(99)01459-3; Schweitz H., Pascaud P., Diochot S., Moinier D., Lazdunski M.; "MITI, a black mamba toxin with a new and highly potent activity on intestinal contraction."; PEBS Lett. 461:183-188(1998).

similarity).
SUBCELLULAR LOCATION: Secreted protein (By similarity).
TISSUE SPECIFICITY: Expressed at high levels in testis and at lower levels in brain, lung, ovary, spleen, thymus and uterus.
INDUCTION: Activated by CLOCK and BMAL1 heterodimers and light; inhibited by pearlod genes (PER1, PER2 and PER3) and cryptochrome genes (CRY1 and CRY2) (Probable).
SIMILARITY: Belongs to the prokinecitin family.

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Description
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Sequence
